Indira Singh
9/11 Whistleblower, Risk Technology Architect, Ground Zero EMT

Indira was born in London England, and is a naturalized US citizen. She's received undergraduate degrees from City University and is now working on a PhD in a clinical field.

With degrees in Mathematics and Biology, she has been working on Wall Street since 1975 working primarily in strategic management consulting arenas.

She was an early practitioner of applying advanced IT techniques to high-level strategic problems. For example, Indira wrote predictive financial, economic and political risk applications in the late 1970's,

utilizing precursors to Artificial Intelligence based modeling and simulation languages.

By the time of the terror attacks on our nation, Indira had over 20 years experience in Information Technology and Risk Management. She had pioneered the field of Risk Enterprise Architecture – creating real time computer models of large global enterprises –to identify and manage all risk exposures.

Her technology experience included developing the Internet for use by the Tibetan Government-in-Exile.

Indira has worked with leaders in technology, risk and security to develop next generation blueprints for business and government sectors.   She consulted for major financial institutions including Credit Suisse First Boston, Deutsche Bank (formerly Bankers Trust), American Express and JP Morgan Chase.

Indira's experience with the United Nations and the Interoperability Clearing House (a DARPA funded company) provided exposure to a variety of government and intelligence operations. In addition, she co-founded the Object Developers Group, a user group dedicated to providing a center of technology excellence for US based IT professionals.

On 9/11 Indira was working as a Senior Consultant for JP Morgan Chase. She was tasked with developing a next-generation operational risk blueprint, which would proactively identify exposures including money laundering, rogue trading and illicit financing patterns. It was in this capacity nine months later she became aware of the biggest threat to our country – a transnationally protected terrorist cartel that brought us 9/11, which continues to operate today.

Indira is a private pilot and a climber. Prior to 9/11, she volunteered as a civilian Emergency Medical Technician, until she was injured at Ground Zero.

She is currently writing two books "Blueprint for Terror", the personal story into her three year investigation as to how and why the US intelligence agencies, mainly the FBI, obstructed efforts to shut down the terror network behind 9/11, specifically her exposing the matter of Ptech, Inc. Ptech, she maintains, is the one "golden thread" linking to all those who paid for and planned 9/11, as well as drugs-for-weapons operations in Turkey, Chechnya and Afghanistan.
